

Treasure Token

- Now on BSC Network -

Everyone needs a safe place to bury their treasure.

Problem: Traditional banks offer a negligent APY incentive to the user for storing value, while at the same time generating enormous wealth for themselves via fractional reserve lending programs.

Solution: Simple APY without greedy financial institutions. Bring power back to the people by creating a fair, decentralized, and open sourced environment where the user can directly benefit from market activity. Users can now store their tokens in their own wallet to manage independently, while effortlessly generating rewards by simply holding.

Excerpt: Sighting in the financial institutions, the Treasure Token Team is working to balance the scales and bring back the opportunity for users to generate passive income in a decentralized venue. As a multi-billion dollar industry, the financial institutions for too long have been enabled by regulation to profit from hard working people, and in turn have paid out very little APY to savings account holders. Treasure is a secure system designed as a safe place to store your \$TRSR tokens. Additionally, a hyper-deflationary mechanism will act to reduce the overall available supply to promote token scarcity.

****10% of every swap and transfer on the decentralized network are redistributed to holders as an incentive to hold \$TRSR tokens.****
