**Abstract.** Treasure is a hyper-deflationary, decentralized cryptocurrency on the Binance Smart Chain with unique tokenomics. Tokens are reflected, added to liquidity, and burned when they're sold. Treasure incentivizes holding as tax rates dynamically decrease from 39% to 0%.

## 1. Safe

Liquidity is locked and ownership is renounced. It is solely reliant on the Binance Smart Chain. Fair launch. No developer, team, or marketing wallets. No presale. The founder and community are self-funding all development, marketing, and promotion for the success of Treasure.

## 2. Tokenomics

100 million total token supply that gradually burns on transactions. Burning stops when the total supply is 21 million. We use the fibonacci sequence to adjust tax rates for each sell transaction. Buying is 0 tax.

### 2.1 Sell rates that provide reflections, liquidity, and burn:
